

Fiix CMMS + SAP:

# Maintain Equipment, Not Data

## Why integrate?

Every day, technology changes and global competition intensifies. To keep up with (and beat out!) your competition, your operations need to be smarter, more connected, and more data-driven. That's why Fiix has [officially partnered](#) with SAP as a Build Partner for ERP integrations that keep data synced, workflows efficient, and proactive maintenance empowered. Seamlessly share information between maintenance, purchasing, finance, and more. Let our skilled team of integration specialists show you how.

## How it works

Fiix® partners with project champions for:

- 1. Kick-off:** Discuss and build out a timeline of work
- 2. Design/Mapping:** Confirm integration design and workflows are aligned with your SAP ECC or S/4HANA business practices
- 3. Development:** Our team of experts develops and deploys to your sandbox environments utilizing the [Boomi](#) platform for scalable and reliable integration
- 4. Testing:** In-depth testing in your sandbox environments with superusers
- 5. Go-live:** Comprehensive training for all stakeholders and deployment to production environments

## Integration Workflows

Our standard SAP ECC or S/4HANA integrations come in three options:

### 1. Full integration

- Data sync (parts, stock, vendors, accounts, and charge department)
- Purchasing
- Part consumption workflows

### 2. Materials Only

- Data sync (parts, stock, vendors, accounts, and charge department)
- Part consumption workflows

### 3. Purchasing Only

Parts are managed solely in Fiix but users have the ability to initiate the purchasing process in Fiix and sync Purchase Orders to your SAP environment

## Pricing\*

**\$33,000**  
one time

**\$5,500/yr**  
for Boomi

**\$16,500**  
one time

**\$5,500/yr**  
for Boomi

\* Based on direct connection to your SAP ECC or S/4HANA environment, subject to final scoping
